Uninsured College Student Population

IMPACT TO DATE OF THE ACA ON STUDENTS AND COLLEGE HEALTH PROGRAMS

- continued

10 a. At any time IN THE LAST 3 MONTHS, has this person attended school or college?
Include only nursery or preschool, kindergarten, elementary school, home school, and schooling which leads to a high school diploma or a college degree.

☐ No, has not attended in the last 3 months → *SKIP to question 11*

☐ Yes, public school, public college

☐ Yes, private school, private college, home school

b. What grade or level was this person attending?
Mark (X) ONE box.

☐ Nursery school, preschool

☐ Kindergarten

☐ Grade 1 through 12 - *Specify grade 1 - 12*

☐ ☐

Uninsured Status of College Students

The ACA significantly reduced the uninsured young adult population. HHS reported that 6.1 million young adults between the ages of 19 and 25 gained health insurance coverage as a result of passage of the ACA.¹⁰

The U.S. Census Bureau's American Community Survey (ACS) is conducted monthly and sent to approximately 295,000 households.¹¹ The survey includes this question for each household member relative to college enrollment status.¹²

Since the survey only asks for undergraduate or graduation/professional school enrollment, it includes both part-time and full-time students, as well as students enrolled in community colleges, and students solely enrolled in online distance education programs. Accordingly, there is no credible national survey database reporting the insurance status of undergraduate and graduate college students enrolled at residential campuses.

Even though the ACS is a broad survey tool relative to the status of the college student population, the data in the following table shows the substantial impact of the ACA in reducing the number of uninsured college students from the beginning of ACA implementation in 2014.¹³

Uninsured College Student Population

IMPACT TO DATE OF THE ACA ON STUDENTS AND COLLEGE HEALTH PROGRAMS

Total	19,863,957	3,805,719	19.2%

As noted in the following section, the above data includes many students who are underinsured due to common limitations for Medicaid, the trend from 2010 to present for employers to adopt high deductible health plans, and the trend from 2014 to present for increased implementation of highly restrictive provider networks.

Two Major Questions

1. Which was the most important in reducing the uninsured college student population?
 - age 26 provision,
 - federal mandate,
 - Medicaid eligibility expansion, or
 - premium assistance for low income persons (above Medicaid eligibility)
2. Did ethnicity remain highly correlated with uninsured student status?

College Enrollment Overview

Source: National Center for Education Statistics—Fast Facts <https://nces.ed.gov/fastfacts/display.asp?id=372>

In fall 2017, some 20.4 million students were expected to attend American colleges and universities, constituting an increase of about 5.1 million since fall 2000 .

Females were expected to account for the majority of college and university students in fall 2017: about 11.5 million females attended in fall 2017, compared with 8.9 million males. Also, more students were expected to attend full time (an estimated 12.6 million students) than part time (about 7.8 million students) .

Some 7 million students attended 2-year institutions and 13.4 million attended 4-year institutions in fall 2017. About 17.5 million students were expected to enroll in undergraduate programs and 3 million enrolled in postbaccalaureate programs .

Increases in the traditional college-age population and rising enrollment rates have contributed to the increase in college and university enrollment. Between 2000 and 2015, the 18- to 24-year-old population rose from approximately 27.3 million to some 31.2 million . The percentage of 18- to 24-year-olds enrolled in college and university also was higher in 2015 (40.5 percent) than in 2000 (35.5 percent) .

In 2015, there were 11.8 million college and university students under age 25 and 8.1 million students 25 years old and over. The numbers of younger and older students increased between 2000 and 2015 .

Explanation for Research Project and Public Use Microdata

“The Public Use Microdata Sample (PUMS) contains a sample of actual responses to the American Community Survey (ACS). The PUMS dataset includes variables for nearly every question on the survey, as well as many new variables that were derived after the fact from multiple survey responses. Each record in the person-level file represents a single person. Individuals are organized into households, making possible the study of people within the contexts of their families and other household members. PUMS files for an individual year, contain data on approximately one percent of the United States population.” (Excerpt from US Census Bureau PUMS Documentation)

When conducting research, the *population* is what we call all the people in a group. In this study, our population is all the people in the US enrolled in college. Sampling is when we only ask a fraction of the population the question we are investigating—in this case 1 percent. Random sampling cuts down tremendously on time and effort to get our questions answered. Additionally, it has been shown that random sampling with a large enough sample size can give you very good estimates. Since a sample is never going to be exactly the same as the population, all the following numbers—derived from PUMS—are *estimates*.

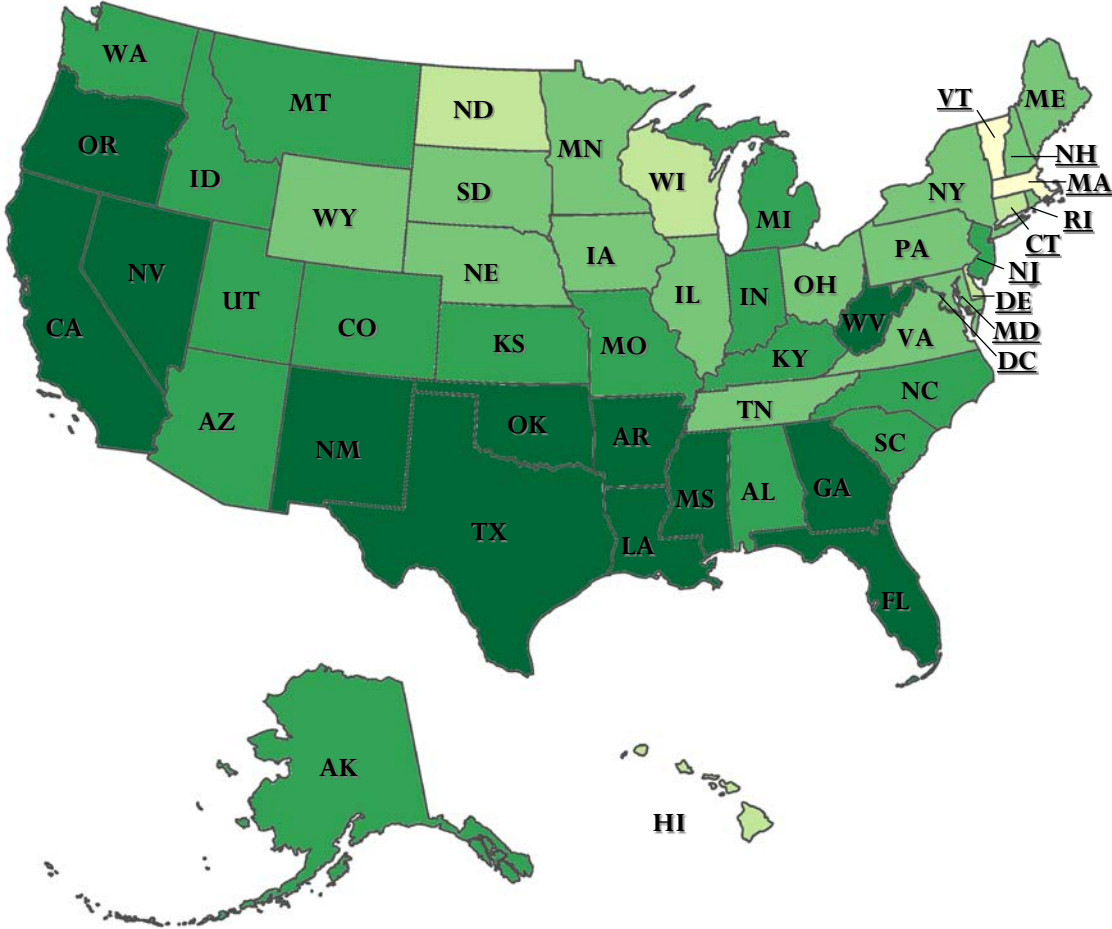

Although we can never say that the sample stats are exactly the same as the population stats, we can observe trends that will stand the test of time. We can say that based on the 2016 data, African Americans and Hispanics are disproportionately uninsured, perhaps even twice as much as their white counterparts. Then we further investigate the concern by looking at the factors and repeating the results in other studies.

*For more data and analysis using PUMS or aggregate ACS datasets, contact **Anna Tapp** at anna@buildingupdreams.com. **Building Up Dreams** leverages the sciences of geography and demographics to create custom datasets and specialized analyses.*
